

Amendments to the Claims:

The following listing of claims replaces all prior listings, and all prior versions, of claims in the application.

Listing of Claims:

Claim 1 (original): Resin coated metal foil including an insulating resin composition layer and metal foil fixed to a single surface or both the surfaces of said insulating resin composition layer, wherein the resin coated metal foil characterized in that surface treatment is performed to at least an insulating resin composition layer side of said metal foil and roughening treatment is not substantially performed to both the surfaces of said metal foil.

Claim 2 (original): The resin coated metal foil according to claim 1, characterized in that surface roughness (Rz) of said metal foil is not more than 2.0 μm in both the surfaces.

Claim 3 (currently amended): The resin coated metal foil according to claims 1 or 2, characterized in that a thickness of said metal foil is not more than 3 μm .

Claim 4 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 1 to 3, characterized in that interfacial roughness (Rz) between said insulating resin composition layer and said metal foil is not more than 2.0 μm .

Claim 5 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 1 to 4, characterized in that said surface treatment is any one of anti-corrosive treatment, chromate treatment, and silane coupling treatment or a combination thereof.

Claim 6 (original): The resin coated metal foil according to claim 5, characterized in that said anti-corrosive treatment is performed with any one of nickel, tin, zinc, chromium, molybdenum, and cobalt or alloy thereof.

Claim 7 (currently amended): The resin coated metal foil according to ~~claims~~claim 5 ~~or~~ 6, characterized in that said insulating resin composition contains cyanate resin and said anti-corrosive treatment is performed with a metal mainly containing nickel.

Claim 8 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 5 ~~to~~ 7, characterized in that said chromate treatment is performed on said anti-corrosive treatment.

Claim 9 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 5 ~~to~~ 8, characterized in that said silane coupling treatment is performed to an outermost layer of said metal foil.

Claim 10 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 5 ~~to~~ 9, characterized in that a silane coupling agent used for said silane coupling treatment chemically reacts with said insulating resin composition by heating.

Claim 11 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 5 ~~to~~ 10, characterized in that said insulating resin composition contains epoxy resin and the silane coupling agent used for said silane coupling treatment contains amino functional silane.

Claim 12 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 1 to 11, characterized in that said insulating resin composition contains thermosetting resin.

Claim 13 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 1 to 12, characterized in that said insulating resin composition contains epoxy resin which is liquid at room temperatures.

Claim 14 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 1 to 13, characterized in that said insulating resin composition contains a latent curing agent.

Claim 15 (currently amended): The resin coated metal foil according to ~~any one of claims~~claim 1 to 14, characterized in that, in said post-cure insulating resin composition, a relative dielectric constant is not more than 3.0 at 1 GHz or a dielectric loss tangent is not more than 0.01 at 1 GHz.

Claim 16 (original): A metal clad laminate including an insulating resin composition layer and metal foil fixed to a single surface or both the surfaces of said insulating resin composition layer, wherein the metal clad laminate characterized in that surface treatment is performed to at least an insulating resin composition layer side of said metal foil and roughening treatment is not substantially performed to both the surfaces of said metal foil.

Claim 17 (original): The metal clad laminate according to claim 16, characterized in that surface roughness (Rz) of said metal foil is not more than 2.0 μm in both the surfaces.

Claim 18 (currently amended): The metal clad laminate according to ~~claims~~claim 16 ~~or 17~~, characterized in that a thickness of said metal foil is not more than 3 μm .

Claim 19 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 16 ~~to 18~~, characterized in that interfacial roughness (Rz) between said insulating resin composition layer and said metal foil is not more than 2.0 μm .

Claim 20 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 16 ~~to 19~~, characterized in that said surface treatment is any one of anti-corrosive treatment, chromate treatment, and silane coupling treatment or a combination thereof.

Claim 21 (original): The metal clad laminate according to claim 20, characterized in that said anti-corrosive treatment is performed with any one of nickel, tin, zinc, chromium, molybdenum, and cobalt or alloy thereof.

Claim 22 (currently amended): The metal clad laminate according to ~~claims~~claim 20 ~~or 24~~, characterized in that said insulating resin composition contains cyanate resin and said anti-corrosive treatment is performed with a metal mainly containing nickel.

Claim 23 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 20 ~~to 22~~, characterized in that said chromate treatment is performed on said anti-corrosive treatment.

Claim 24 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 20 ~~to 23~~, characterized in that said silane coupling treatment is performed to an outermost layer of said metal foil.

Claim 25 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 20 to 24, characterized in that a silane coupling agent used for said silane coupling treatment chemically reacts with said insulating resin composition by heating.

Claim 26 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 20 to 25, characterized in that said insulating resin composition contains epoxy resin and the silane coupling agent used for said silane coupling treatment contains amino functional silane.

Claim 27 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 16 to 26, characterized in that said insulating resin composition contains thermosetting resin.

Claim 28 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 16 to 27, characterized in that said insulating resin composition contains epoxy resin which is liquid at room temperatures.

Claim 29 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 16 to 28, characterized in that said insulating resin composition contains a latent curing agent.

Claim 30 (currently amended): The metal clad laminate according to ~~any one of claims~~claim 16 to 29, characterized in that, in said post-cure insulating resin composition, a relative dielectric constant is not more than 3.0 at 1 GHz or a dielectric loss tangent is not more than 0.01 at 1 GHz.

Claim 31 (currently amended): A printed wiring board characterized by being manufactured with resin coated metal foil according to ~~any one of claims~~claim 1 to 15 and/or a metal clad laminate according to ~~any one of claims~~ 16 to 30.

Claim 32 (original): The printed wiring board according to claim 31, characterized in that surface roughness (Rz) of a conductor circuit is not more than 2.0 μm .

Claim 33 (currently amended): The printed wiring board according to ~~claims~~claim 31 or 32, characterized in that peel strength between said insulating resin composition layer and a conductor circuit having a width of 1 mm is not lower than 0.6 kN/m.

Claim 34 (currently amended): The printed wiring board according to ~~any one of claims~~claim 31 to 33, characterized in that the peel strength between said insulating resin composition layer that has been heated at 150°C for 240 hours and the conductor circuit having the width of 1 mm is not lower than 0.4 kN/m.

Claim 35 (currently amended): A method of manufacturing a printed wiring board, characterized by having a process of producing a conductor circuit through pattern electroplating in which resin coated metal foil according to ~~any one of claims~~claim 1 to 15 and/or metal foil of a metal clad laminate according to ~~any one of claims~~ 16 to 30 is used as an electric power supply layer.

Claim 36 (original): The printed wiring board manufacturing method according to claim 35, characterized in that an electroless plating layer is formed on said metal foil.

Claim 37 (currently amended): The printed wiring board manufacturing method according to ~~claims~~claim 35 ~~or 36~~, characterized in that chemical reaction rate-determining etchant is used when said metal foil which is ~~aan~~ electric power supply layer is removed by etching after formation of the conductor circuit.

Claim 38 (original): The printed wiring board manufacturing method according to claim 37, characterized in that said etchant mainly contains an acid which does not contain a halogen element, and hydrogen peroxide.

Claim 39 (original): The printed wiring board manufacturing method according to claim 38, characterized in that said acid which does not contain the halogen element is sulfuric acid.

Claim 40 (original): The printed wiring board manufacturing method according to claim 39, characterized in that concentrations of said sulfuric acid range from 5 to 300 g/L and concentrations of said hydrogen peroxide range 5 to 200 g/L.

Claim 41 (new): A printed wiring board characterized by being manufactured with a metal clad laminate according to claim 16.

Claim 42 (new): The printed wiring board according to claim 41, characterized in that surface roughness (Rz) of a conductor circuit is not more than 2.0 μm .

Claim 43 (new): The printed wiring board according to claim 41, characterized in that peel strength between said insulating resin composition layer and a conductor circuit having a width of 1 mm is not lower than 0.6 kN/m.

Claim 44 (new): The printed wiring board according to claim 41, characterized in that the peel strength between said insulating resin composition layer that has been heated at 150°C for 240 hours and the conductor circuit having the width of 1 mm is not lower than 0.4 kN/m.

Claim 45 (new): A method of manufacturing a printed wiring board, characterized by having a process of producing a conductor circuit through pattern electroplating in which metal foil of a metal clad laminate according to claim 16 is used as an electric power supply layer.

Claim 46 (new): The printed wiring board manufacturing method according to claim 45, characterized in that an electroless plating layer is formed on said metal foil.

Claim 47 (new): The printed wiring board manufacturing method according to claim 45, characterized in that chemical reaction rate-determining etchant is used when said metal foil which is a electric power supply layer is removed by etching after formation of the conductor circuit.

Claim 48 (new): The printed wiring board manufacturing method according to claim 47, characterized in that said etchant mainly contains an acid which does not contain a halogen element, and hydrogen peroxide.

Claim 49 (new): The printed wiring board manufacturing method according to claim 48, characterized in that said acid which does not contain the halogen element is sulfuric acid.

Claim 50 (new): The printed wiring board manufacturing method according to

claim 49, characterized in that concentrations of said sulfuric acid range from 5 to 300 g/L and concentrations of said hydrogen peroxide range 5 to 200 g/L.
